R1-F1 ($\tilde{\lambda}$ = 0.1): moves on the movement-cost map; contours = distress score (LightGBM, out-of-fold, 30-NN mean in 2-D)

(a) Class 2: Classical MDS (Ψ_{c2}, 2-D share 27%)

(b) Class 1: Classical MDS (Ψ_{c1}, 2-D share 27%)

(c) Class 2: Distress logit (LogReg) × MDS 1 residual

(d) Class 1: Distress logit (LogReg) × MDS 1 residual

Healthy firms (class 0)
Distressed start x_i (class 2, n=55)
R1-F1 endpoint y_i* ($\tilde{\lambda}$ = 0.1)
Real recovery 2022→2024 (n=15)
Median logit of healthy firms

Healthy firms (class 0)
Distressed start x_i (class 1, n=128)
R1-F1 endpoint y_i* ($\tilde{\lambda}$ = 0.1)
Real recovery 2022→2024 (n=57)
Median logit of healthy firms

MDS 1
MDS 2
MDS 1 residual (orthogonal to the logit)
LogReg distress logit (higher = riskier)
Distress score
